Direct Tapping Machine Operator’s Manual
Manual del operador para aterrar

DIRECT TAPPING MACHINE - TM1100
COMBINATION TAPPING & DRILLING MACHINE - CDTM1100, CDTM2100
Basic Product Information:
The TM1100 Direct Tapping Machine drills and taps pressurized water mains. The tool additionally installs a 3/4” or 1” corporation stops. The tool can drill and tap 4”-48” cast or ductile iron and C-900 PVC. The base tool requires saddles for specific sizes and chain extensions above 16”. The tool uses Reed DT series drill taps.

Additional Specifications
- Tool Box overall outside dimensions: TM1100 27 x 5/8 x 13 3/4 x 14
- Machine Clearance radius: TM1100 = 32”
- Pressure Rating: Design pressure rating for valve and chamber = 250 psi.
- Operating Pressure Rating - 90 psi - ie - Drilling or Tapping into pressurized mains.

Warning:
Drilling or Tapping into highly pressurized mains is not recommended. However, it is permissible at pressure up to 250 psi, if utilizing special precautions and incorporating high pressure attachments such as the Mueller® Power Clevis #H-10800. (See operations and maintenance manual.) DO NOT USE on natural gas or petroleum piping.

- Flushing/blow by port: 1/2-14 NPT plugged port is provided in bottom chamber for flushing chips while tapping into pressurized mains.
- Swing check valve resists clogging and is easy to clean out.
- Manual pressure balancing and top chamber pressure relief valves are accessible and easy to use.
- Manual or power drive operation through 13/16” square shaft (Adapter sold separately).

Materials and Finish:
A. Hard anodized and powder epoxy painted aluminum frames.
B. Alloy steel boring bar.
C. Heavy duty steel chain and forged steel chain hooks.
D. Bronze and zinc aluminum parts.
E. EPR rubber gaskets and “O” rings.
F. Plated steel parts.

TM1100 Operating Instructions:
Warning:
The maximum operating pressure for this tool is 90 psig (621 kPa). When using a power clevis, the maximum operating pressure is 250 psig (1724 kPa). DO NOT USE this tool on pipes containing natural gas or petroleum products.

Warning: Dry tap a piece of pipe to acquaint personnel with the machine and to preset groove depth for tapping.

1. Select proper tools necessary to perform tap.
   A. Corporation stop.
   B. Drill tap size to match corporation stop threads.
   C. Proper size saddle.
   D. Proper size corp insertion tool.
   E. Any other necessary accessories to meet operating requirements.

2. Assemble chamber to the pipe.
   A. Clean area of pipe where tap will occur. Use a REED DS12 or DS36 Descaler.
   B. Place bottom gasket into the tapping saddle before placing saddle on the pipe.
   C. Place tapping saddle on the top of the pipe with the tabs/ears of the saddle parallel with the length of the pipe.
   D. Place disc gasket on the top recess area of the saddle.
   E. Unscrew the top cap (assembled with Boring Bar).
   F. Place the machine chamber onto the disc gasket recess. Position the machine so the swing valve is on the same side as the operator.
   G. Place chain hooks and swivels into slots on both sides of the chamber.
   H. Connect the chain to one of the chain hooks, bring chain under the pipe and connect on the other side to the nearest link. Do not twist or create kinks in the chain.
   I. Hand tighten nuts.

NOTE: Use additional chain extensions and clevis for diameters over 16”.

3. Position chamber at desired angle between 45° and 90° from vertical. Tighten down chain nuts EVENLY, using REED CW12 Adjustable Wrench or L2017 Dual Socket Ratchet Wrench.
   A. Ensure the gaskets make good contact.
   B. Verify chain holds the machine securely on the pipe and saddle.

4. Insert Drill Tap into Boring Bar.
   A. Push knockout pin in Boring Bar to its holding position. (Toward flat side of bearing)
   B. Insert shank end of drill tap and align pin with slots in bar end.

NOTE: Make sure inside taper of the boring bar is clean before inserting the drill tap.
C. Make sure drill tap is securely seated and lightly tighten the tool retaining screw.

NOTE: Do not over tighten the retaining screw that holds the drill tap. Over tightening can strip out the threads.
D. Retract tool end of Boring Bar all the way into the top cap.
E. Generously coat tap with REED Tapping Compound #98425 or #99140.  
**NOTE:** Always use clean drill taps coated with tapping compound. Fully clean drill tap threads with wire brush between taps and reapply tapping compound.

5. **Assemble top and bottom halves**  
A. Verify:  
   a. Swing valve open.  
   b. Upper ball valve shut. 
   c. Needle valve (silver star knob) shut, clockwise.  
B. Screw Boring Bar top cap hand tight onto the top chamber (1 3/4 Turns).  
C. Push down Boring Bar slowly until bit touches the pipe.  
D. Adjust the Star Feed as necessary. Place the Yoke over the bearing.  
E. Put ratchet wrench on top of Boring Bar.

6. **Drilling and Tapping**  
A. Preparing to Drill  
   a. Manually: Adjust the ratchet wrench to turn clockwise.  
   b. Power Drive: Reed Power Drive Adapter #98427, 700PDTMPDA #05276 or 601PDTAP #05246. The operator can control the feed rate for drilling.  
B. Drill through the pipe by pulling the ratchet wrench clockwise and turning the star feed clockwise in a smooth and consistent manner. An easily turning Boring Bar and star feed indicates one has completed drilling through the pipe wall.  
**NOTE:** Do not overfeed the drill taps, let the bits do the cutting before feeding. Turn the drill tap one full revolution by hand before feeding.  
C. If appropriate, open the ball valve to allow flushing of chips while drilling.  
D. Feed drill tap down until feeling resistance. One will feel resistance when the tapping threads contact the pipe wall.  
E. Begin tapping by rotating the ratchet wrench.  
F. Continuously turn the feed housing. Rotate in a smooth and constant manner. **DO NOT FORCE** the star feed. Forcing the star feed will strip off the threads.  
G. Continue tapping until start of the 3/32” wide groove (Depth Stop Line) in the Boring Bar sits flush with the Main Body. This depth should result in a satisfactory tap. Resharpened drill taps may require two additional turns. Other manufacturer’s drill taps may vary. Consult drill tap manufacturer’s instructions.

7. **Drill Tap Removal**  
A. Reverse the ratchet detent lever (or Power Drive Switch) and carefully back the drill tap out of the tapped hole using a counterclockwise rotation.  
B. Once the drill tap is free of the pipe, retract the Boring Bar to its uppermost position.

C. Close the swing valve by pushing down on the handle and turning it 90 degrees counter-clockwise.  
D. Open the pressure relief valve on the top chamber to release pressure, then close it again.  
E. Unscrew the top cap assembly from the valve chamber.  
F. Loosen the tool retaining screw and strike the end of the knockout pin to release the drill tap.

8. **Attaching Corporation Stop to Boring Bar**  
A. Verify the selected corp stop matches the size intended and the drill tap size.  
B. Verify the corporation stop is in closed/off position.  
C. Screw the corp stop and corp adapter together.  

*Consider conducting dry taps to determine a depth that works best for you.*
10. Releasing the Corporation Adapter

A. Reverse the ratchet to turn counter clockwise.
B. Remove play from the ratchet wrench with one hand, and strike the wrench handle with the other hand to disen gage the corporation adapter from the adapter shank.
C. Rotate the ratchet wrench coun ter clockwise until the adapter shank is completely free.
D. Verify quality of corp stop seal by opening the chip flush valve and attempting to release pressure in the chamber. If pressure does not drop and water continues to flow, re-engage corp stop with the boring bar and attempt to tighten the corp stop further.

9. Inserting the Corp Stop

A. Attach the ratchet wrench onto the Boring Bar and set it for clockwise rotation.
B. Turn the star knob counter clockwise 1 turn to balance the pressure.
C. Push down on the swing valve handle and turn 90 degrees clockwise.
D. Push the Boring Bar down until the corp stop threads touch the pipe.
E. If not already done, swing Yoke over the Boring Bar to engage the bearing. Feed the bar as needed.
F. To start the engagement, rotate the Boring Bar clockwise while carefully turning the feed housing clockwise. Once the threads are engaged, disengage the Yoke. Continue rotating until the corporation stop feels solid. Do not attempt to permanently tighten the corporation stop with the machine.

11. Machine Removal

A. Unscrew top chamber assembly.
B. Loosen the chain hook nuts and unhook the chain. Remove hooks from the machine.
C. Carefully remove the machine, saddle, and gaskets and place them on a clean surface.
D. Tighten the corporation stop using a Smooth Jaw Wrench only; DO NOT USE A PIPE WRENCH.
E. Remove the corp adapter using the REED RCORP wrench provided.
CDTM1100 and CDTM2100
Operating Instructions:

1. Drilling
A. Convert direct tapping set up to drilling set up.
   i. Remove 99307 Bearing Assembly by backing out the single set screw.
   ii. Remove the tapping boring bar from the 99300 Threaded Body
   iii. Insert the drilling machine boring bar into the threaded body.
   1. 3/4” and 1” branch taps - reinstall bearing assembly. Line the set screw up with the lower hole in the boring bar. Drive the screw in until recessing the screw slightly. (See figures 2 & 3)
   2. 1-1/2” and 2” branch taps -
      a. Install 99301 Sleeve.
      b. Reinstall bearing assembly. Line the set screw up with the lower hole in the boring bar. Drive the screw in until recessing the screw slightly. (See figures 2 & 3)
      c. Follow DM1100/DM2100 operating instructions to tap branch lines.

2. Tapping
A. Convert drilling set up to tapping set up.
   i. Remove 99307 Bearing Assembly. Back the single set screw out past the sleeve then remove the bearing assembly and sleeve.
   ii. Remove the drilling boring bar from the 99300 Threaded Body
   iii. Insert the tapping machine boring bar into the threaded body.
   iv. Reinstall the bearing assembly on the tapping bar.
   v. Line the set screw up with the lower hole in the boring bar.
      Drive the screw in until recessing the screw slightly.
   B. Follow TM1100 to tap branch lines.

Maintenance Instructions:
TM1100, CDTM1100, CDTM2100

Before Using
1. Clean and oil all bearing and wear surfaces and threads.
2. Inspect and clean tapping bits, and remove chips and scale.
   Chips and scale may prevent proper function of the tool.
3. Inspect and clean the Boring Bar tool end. Chips and scale may interfere with the insertion of the tapping bit or adapter shank.

After Using
1. Clean the machine and oil the machined surfaces. If necessary, the top and bottom chambers can be easily disassembled to clean more thoroughly.
2. Lubricate the tool holding area of the boring bar with REED #98425 Tapping Compound.
3. **Flush the bottom chamber** with a water hose to remove any chips. DO NOT hammer frames to remove chips or debris - Handle Carefully!
4. Protect threaded pieces by assembling them with their mating parts.
5. Periodically, inspect the Boring Bar’s o-ring seals and replace if worn.
6. Carefully, place the tool back in the toolbox for storage.

Figure 1
Line up notch with set screw—to prevent pilot drill from twisting when drilling.

1/4" Pilot Drill

1/8" Hex wrench for tightening set screw on Arbor body

Note: When drilling PVC pipe, use PL shell cutters and no pilot drill.

Reed Lifetime Warranty

Reed Hand Tools are for the professional trade and are warranted against all failure due to defects in workmanship and materials for the normal life of the tool.

FAILURES DUE TO MISUSE, ABUSE, OR NORMAL WEAR AND TEAR ARE NOT COVERED BY THIS WARRANTY.

Power units for Universal Pipe Cutters, Saw It® pneumatic saw, hydrostatic test pumps, cordless power pipe bevelers, and threading power drives are warranted for a period of one year from date of purchase. Hydraulic pumps for PE Squeeze-Off tools have a one year warranty from date of purchase.

NO PARTY IS AUTHORIZED TO EXTEND ANY OTHER WARRANTY. NO WARRANTY FOR MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE SHALL APPLY.

No warranty claims will be allowed unless the product in question is received freight prepaid at the Reed factory. All warranty claims are limited to repair or replacement, at the option of the company, at no charge to the customer. REED IS NOT LIABLE FOR ANY DAMAGE OF ANY SORT, INCLUDING INCIDENTAL AND CONSEQUENTIAL DAMAGES. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion may not apply.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

Garantía de por vida de Reed

Las herramientas manuales de Reed son para el negocio profesional y están garantizadas contra cualquiera avería por defectos en manos de obra y de materiales durante la vida normal de dichas herramientas.

LAS AVERÍAS DEBIDO AL MAL USO Y EL ABUSO, O LA ROTURA Y EL DESGASTE NORMALES, NO ESTÁN CUBIERTAS POR ESTA GARANTÍA.

Las unidades motrices para cortatubos universales UPC, sierra neumática Saw It®, bombas para pruebas hidrostáticas, biseladoras inalámbricas, motopropulsores para roscadora y las bombas hidráulicas para prensas de flujo PE tienen una garantía de un año a partir de la fecha de compra.

NADIE ESTÁ AUTORIZADO PARA OTORGAR NINGUNA OTRA GARANTÍA. NO SE APLICARÁ NINGUNA GARANTÍA DE COMERCIABILIDAD O IDONEIDAD PARA UN FIN PARTICULAR.

No se permitirá ningún reclamo de garantía excepto que el producto en cuestión se reciba con fletes prepagados en la fábrica de Reed. Todos los reclamos de garantía están limitados a reparación o sustitución, a elección de la compañía, y sin cargo para el cliente. REED NO ES RESPONSABLE DE DANOS DE NINGÚN TIPO, INCLUIDOS LOS CIRCUNSTANCIALES E INDIRECTOS.

En algunos estados no se permite la exclusión o la limitación de los daños circunstanciales o indirectos, por lo que la exclusión anterior puede no aplicar.

Esta garantía le otorga derechos legales específicos, y usted puede contar también con otros derechos que varíen de estado a estado.
