

PIPE TOOLS & VISES  
SINCE 1896

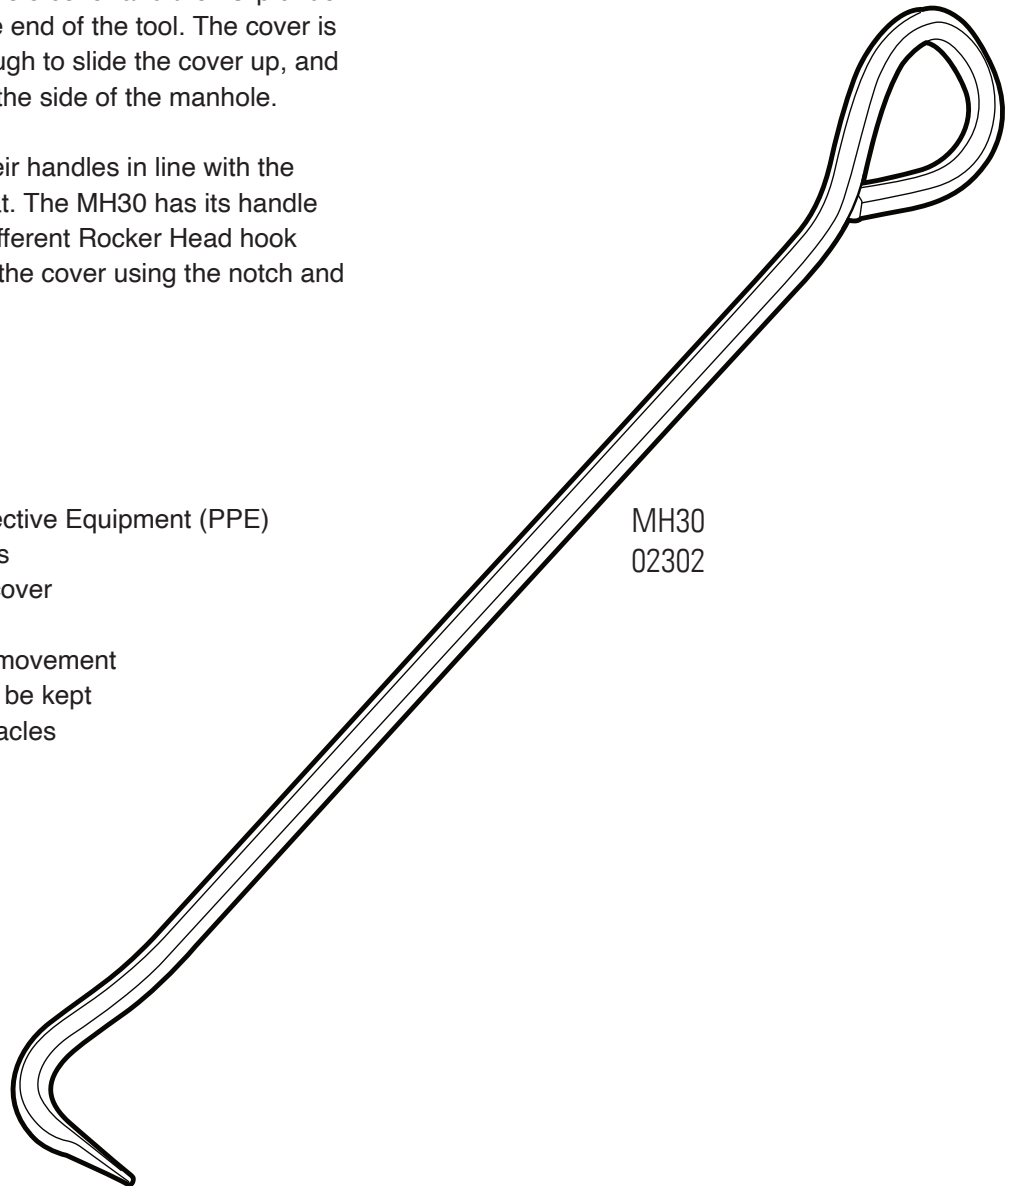

Applies to: 02301,  
02302, 02303

Insert the tip of the REED Manhole Hook into the Pickhole or Notch in the rim of the manhole cover and then slip under the cover by raising the handle end of the tool. The cover is then lifted on one side far enough to slide the cover up, and with a sideways motion, off to the side of the manhole.

The MH26 and MH36 have their handles in line with the hook so they are able to lay flat. The MH30 has its handle turned 90 degree and has a different Rocker Head hook shape to aid with prying/lifting the cover using the notch and for better insertion angles.

### For safety when using REED Manhole Hooks:

- Wear proper Personal Protective Equipment (PPE)
- Use proper lifting techniques
- Keep area under manhole cover clear when lifting
- Caution: The direct path of movement of the tool and cover should be kept clear of user and other obstacles

MH30  
02302

Cat. No.	Item Code	Handle to Hook Relationship	Length		Weight	
			in	mm	lbs	kg
MH26	02310	Same plane	26	650	3.3	1.5
MH30	02302	Hook 90° to handle	30	760	4.0	1.8
MH36	02303	Same plane	36	900	4.3	2.0
